The solutions for personalised access to gyms, spas, theatres and much more...

Even theatres, gyms and many other facilities provide the possibility for clients to apply for memberships (monthly, annually or seasonal) or similar solutions (for example, 10 or 20 admissions etc.) and usually they give the client a card to enable access.

In this case, the facility wants to ensure that only those who have paid the membership can gain access, but it is easy to understand that this system can be abused by giving the card to a friend, so that the latter can gain free access.

PrivacyCard will prohibit the use of any kind of membership as well as safeguarding and protecting the user.

Moreover, the manager will ensure that anybody gaining access to the facility will definitely be a member.

In order to better understand the PrivacyCard functions, let us compare it with the existing systems.

CURRENT SYSTEM AND POTENTIAL PROBLEMS	WITH THE PRIVACYCARD
The current membership system used in spas and gyms use a card to allow access only to those persons that have paid their monthly or seasonal membership. But this card can be used by anyone if it is lost or loaned to a third party.	Our system will ensure that whoever is using the card is the legitimate owner and that he/she has effectively paid the membership for that period.
The membership card is changed every year. This entails additional expenses for the business entity.	The same card, from the previous year, can be used once again by simply authorising the selected client membership and validating it through the actual fingerprint activation.
Collection of sensitive data related to employees and compilation of a large number of GDPR forms.	There will not be any Privacy issue since this system is entirely in line with the Privacy Protection regulations and consequently there is no need to register the GDPR forms.

The feature, that we have patented internationally, which makes us unique is provided by an extraordinary specific technique: the system entails the management of biometric data, which are very sensitive and valuable, since they are unique, totally offline, for the collection and verification phase, by always remaining in the possession of the owner without the possibility of being used in case of negligence. Therefore, the system ensures maximum protection of the specific data thus avoiding storage, transfer and processing issues, which would be contrary to the stringent European Privacy regulations.

The 100% secure biometric card!!
