

SANYfin20

The project stems from the health needs that are especially evident in these times.

A **PATENTED** sanitation system, based on the use of **UV-C rays**. The latter have already been tested by various laboratories as a means of eliminating germs, bacteria, and viruses.

Automated system

Greater security for operators and users of devices such as fingerprint readers, POS, and all devices for mixed use.

Zero additives, zero alcohol-based substances or others, thus respecting the environment and avoiding waste production.

An individual who has infected hands and uses the device...

...can contaminate the appliance itself and therefore infect other people.

With the SANYfin20 system, the risk of contagion is removed.
